CONNECTIONS

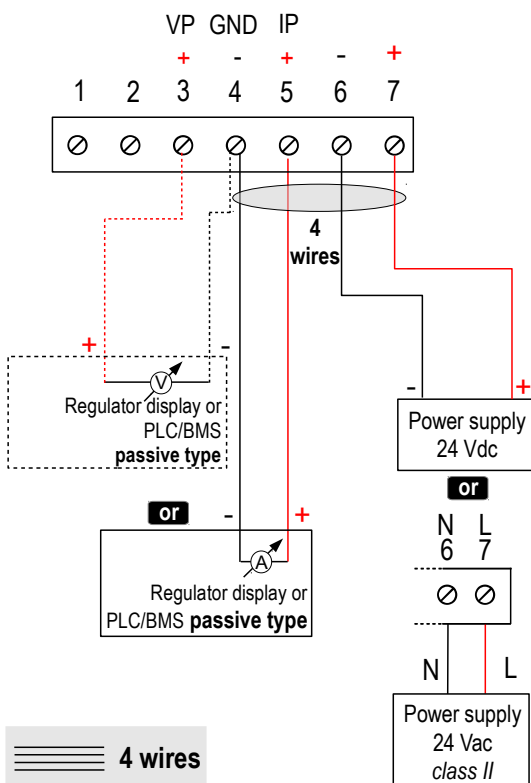

ELECTRICAL CONNECTIONS – as per *NFC15-100 standard*

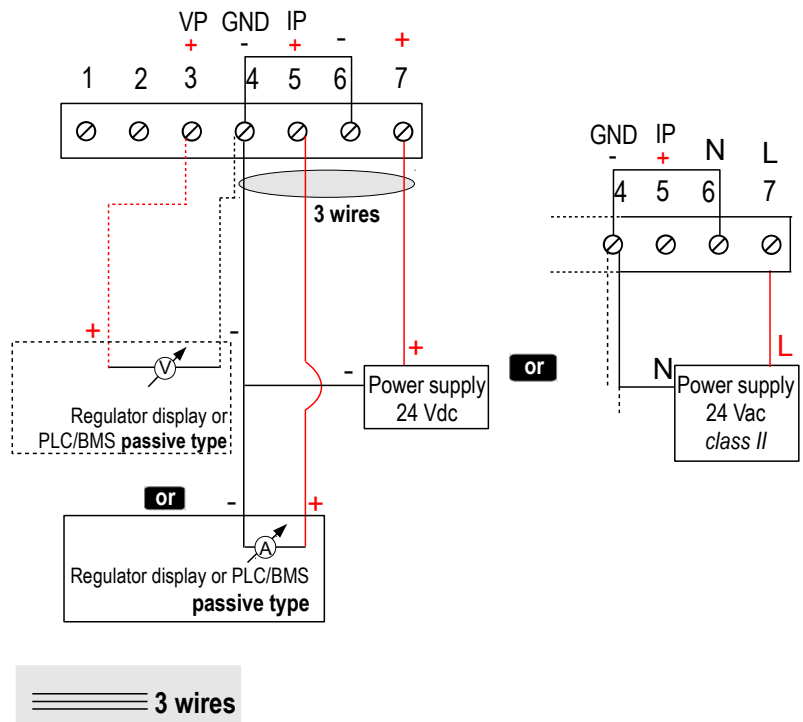

This connection must be made by a qualified and trained technician. To make the connection, the transmitter must not be energized.

For CP114/115 – AO models and CP114/115 – AN models with 0-10 V or 4-20 mA output – active, 4 wires :

To make a 3-wire connection, before powering up the transmitter, please connect the output ground to the input ground. See drawing below.

For CP114/115 – PO models and CP114/115 – PN models with 4-20 mA output – **passive**:

SETTINGS AND USE OF THE TRANSMITTER

> Autozero

To perform an autozero, unplug the 2 pressure connections tubes and press the “**Autozero**” key. When an autozero has been performed, “**On**” green light turns off then turns on, and on transmitters equipped with a display, “**autoZ**” is displayed.

> Configuration

To configure the transmitter, it must not be energized. Then, you can make the settings required, with the DIP switches (as shown on the drawing below). When the transmitter is configured, you can power it up.

To configure the transmitter, unscrew the 4 screws from the housing then open it. DIP switches allowing the different settings are then accessible.

> Measuring range settings – left DIP switch

To set a measuring range, put the 1, 2 and 3 on-off switches as indicated in the table below.

- Measuring ranges of the **CP114 transmitter** on the **±500 mbar range** according to the measurement unit.
- Measuring ranges of the **CP115 transmitter** on the **±2000 mbar range** according to the measurement unit.

Example:

- From 0 to 750 mmH₂O, measuring range is 750 mmH₂O.
- From -500 mbar to +500 mbar, measuring range is 1000 mbar.

> Standard range / central zero setting – left DIP switch

To set the type of measuring range, put the on-off switch 4 as indicated beside:

Example 0-100 mbar: Full scale / 0 (0 / 100 mbar)
 Central zero (-50 mbar / 0 / +50 mbar)

Configurations	Full scale	Central zero
Combinations		

 Please follow carefully the combinations beside with the DIP switch. If the combination is wrongly done, the following message will appear on the display of the transmitter "CONF ERROR". In that case, you will have to unplug the transmitter, place the DIP switches correctly, and then power the transmitter up.

> **Output setting – right DIP switch (CP114/115 – AO and CP114/115 – AN models)**

To set the type of analogue output, please put the on-off switch of the output as shown beside.

CONFIGURATION VIA LCC-S SOFTWARE (option)

An easy and friendly configuration with the software!

You can configure your own intermediary ranges.

Caution : the minimum difference between the high range and the low range is 20.

For example, it is possible to set the instrument from -20 to 0 mbar, from 0 to +20 mbar, or from -10 to +10 mbar...

• To access the configuration via software:

- Set the DIP switches as shown beside. *Nota : the on-off switch 1 of the right DIP switch can be in any position (selection of the analogue output 0-10 V or 4-20 mA)*
- Connect the cable of the LCC-S to the connection of the transmitter.

• Please refer to the user manual of the LCC 100 to make the configuration.

The configuration of the parameters can be done either with the DIP switch or via software (you can not combine both solutions).

MOUNTING

To mount the transmitter, mount the ABS plate on the wall (drilling: Ø6 mm, screws and pins are supplied).

Insert the transmitter on the fixing plate (see A on the drawing beside). Rotate the housing in clockwise direction until you hear a "click" which confirms that the transmitter is correctly installed.

 **Once the transmitter is installed and powered up, please make an autozero to guarantee the correct working of the transmitter in any position.**

MAINTENANCE

Please avoid any aggressive solvent. Please protect the transmitter and its probes from any cleaning product containing formalin, that may be used for cleaning rooms or ducts.
