Sensors position adjustment

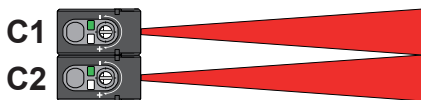

- Translate the sensor or object, up/down and left/right. When the setting is optimal, the stability indicator (green) is lit.
- Check sensor operation with the object and adjust the sensor, if necessary.

Anti-interference for side by side mounting

Anti-interference system to ensure good detection even disturbed by another sensor when mounted side by side

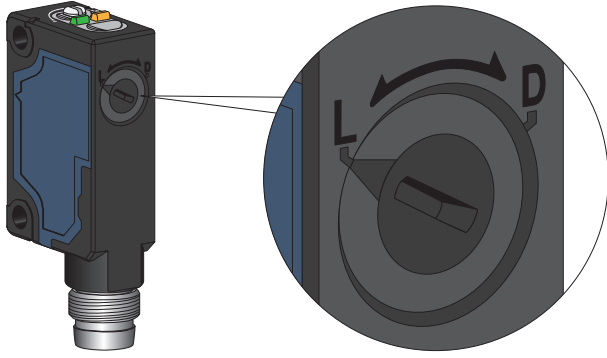

Anti-interference system allows a side by side installation and ensures a reliable detection.

This Anti-interference system ensures an object detection in all conditions.
